## Short presentation

My research is about the theory and the applications of statistical methods for binary, longitudinal and time-to-event data. I participate in collaborative projects in which modern statistical methods are used to draw causal conclusions from observational studies with the aim to improve information systems and treatment options. I contribute to the ongoing development of statistical methodology and computer algorithms for studies in medicine and public health.

## Employment

### Professor

Section of Biostatistics

København K, Denmark

1 Aug 2016 → 31 Jul 2021

### Associate professor

Core Biostatistik

København K

1 Feb 2010 → 4 Mar 2013

### Associate Professor

Department of Public Health

København K, Denmark

1 Feb 2010 → 10 Jun 2013

### Associate Professor

Department of Public Health

København K, Denmark

1 Feb 2010 → 3 Oct 2013
