Short presentation

I have resently come back to focus on research (Cholera) after years in teaching and institutional development . I am currently heading the disaeter and environmental health research group at the section of Global health in the department of Public health. Through my previus position as Director of the Copenhagen Center for Disaster Research, COPE, I have gained a large network and am connected with many disaster researchers working at University of Copenhagen. Before COPE was established, I was Head of Studies for the Master of Disaster Management programme (MDMa), which I co-created in 2008. The interdisciplinary connections I have made through my work with MDMa and COPE now manifest themselves in the variety of my current research interests.

Current research:

Combating Cholera caused by Climate Change in Bangladesh (C5)

A multidisciplinary DANIDA-funded study examining the risk and effects of climate-induced cholera on water stress and household hygiene in low-income area Tongi, Bangladesh.

Changing Disasters

An interdisciplinary research project embracing all six university faculties. The project investigates how modern societies interact with disasters.

Interdisciplinary Learning

Combining interdisciplinary research based in COPE with interdisciplinary teaching at MDMa.

Primary research
My core area is Environmental Hygiene; mainly water and sanitation, as well as the transmission of hygiene-related diseases (such as cholera and other diarrheal diseases) during disasterous events and in developing countries.

Primary teaching

Master of Disaster Management core module

Water and Sanitation in Emergency course

International Health course, Public health science
